Thank you.

Please, how do i make the authentication on the mail server, to send login and password?

I see that there is a class WebUser but how to i "link" this class to the Smtplib class to do authentication at email server?

I have this code, but does nothing.

```
Smtplib mail;  
mail.Host("smtp.gmail.com");  
mail.Port(587);  
  
mail.To("alex@gmail.com");  
mail.From("alex@gmail.com");  
mail.Subject("Upp email test");  
mail.Text("This is an email sent from an upp app");  
  
mail.Send();  
  
PromptOK("Email Done!");
```

Thanks a lot

Alex
