Subject: Re: FileSel::ExecuteSaveAs() crashes
Posted by bonami on Tue, 10 Nov 2009 03:14:01 GMT

most recent discovery,
filesel.cpp:line 390 crashes. if i change it to return basedir, it works. i don't know why "String s = ~dir;"

i've tried 1680, too. it still fails. now i've trimmed irrelavent files.
chinese xp: runs well.
english xp: no crashes. (program built on chinese xp, using MSC.)
chinese ubuntu: memory failure when building optimal; no crashes when built to debugging. (built on ubuntu, using GCC.)
i've included the two errors' photos in the zip file.
