Well, the problem is caused by 0x2b9 character - that is not supposed to be displayed alone.

It is "Spacing modifier letter":

http://en.wikipedia.org/wiki/Unicode_Phonetic_Symbols

It looks like Win32 has problems combining these letters, at least when character spacing is used in DrawText (which is what DocEdit does).

I am not quite sure what to do with the problem...

Should this be handled by DrawText? It looks like if I omit spacing info (dx parameter), Win32 draws these characters quite OK....
