i've been working in the past 3 days on a GraphCtrl to display any directed graph in such a way that would be easier to read and if possible with minimum overlapping edges.

The algorithm so far works perfect and it is specially designed to display a graph as it would be a include graph(meaning with no or very fiew graph cycles). This will be the first thing i will post soon here so that people could test various graph configurations.

i will leave the integration in the Ide the last thing to do(if someone wants do do this voluntarily, i don't mind .

Raxvan.
