koldo wrote on Wed, 02 December 2009 02:49Hello Mirek

Very recently there have been a change in DrawLineStroke() so that from now all lines are rounded. All previous calls to LineCap() are useless:

```
void Painter::DrawLineStroke(int width, Color color)
{
    Begin();
    LineCap(LINECAP_ROUND); <<=== Line added
    switch(width) {
         case PEN_NULL:
              Stroke(0, color);
              End();
              return;
         case PEN SOLID:
              Stroke(1, color);
              break:
         case PEN DASH:
              Dash("18 6");
              break;
         case PEN_DOT:
              Dash("3 3");
              break;
         case PEN DASHDOT:
              Dash("9 6 3 6");
              break;
         case PEN DASHDOTDOT:
              Dash("9 3 3 3 3 3");
              break:
    default:
         Stroke(width, color);
         End();
         return;
    Stroke(1, color);
    End();
}
It would be good if you could remove that line
```

Best regards Koldo

This is to improve the similarity of Painter and host platform Draw. Win32 basic line draw has caps rounded...

If you need full control, please use Painter API.
