unodgs wrote on Thu, 03 December 2009 23:46In GridCtrl you can switch to cellmode:

```
grid.SelectRow(false);  
geid.EditCell();
```

You can make rectangular selection then with ctrl key.

Hello Uno

Thank you for your response. I have applied but I get this:

Row selection works well but column selection does the same (selections goes to the rightmost column and comes to the leftmost).

However copy and paste works well. Pasting a rectangular selection from Excel is done perfectly.

Best regards

Koldo
