hi there

i was in need to use the plugin/ftp FtpClient with the presence of a Gate2<int, int> callback for the Progress, just like in the HttpClient. so this one is a quick hack, really quick.

the ones who coded the FtpClient should maybe take a look on it, to make HttpClient and FtpClient behave similar in the Progress point, so far it only shows progress in the SaveCount stuff..

in all the other calls I just use WhenProgress(0,0), no idea if this is right, the Progress just spins around, which is sort of ok, indicating that something is in progress

greetz

PS: simply replace, it should compile fine, since i have taken the last svn release, which is 64
