Hello Uno

Perhaps other focus would be to have an EditString that would appear on the selected cell when double clicked.

The problem I have is that I do not know the location of the double-clicked cell to fit on it the EditString.

In the screenshot the cell with "20" has been double clicked, the EditString is filled with the right formula ($12+8 = 20$), but it should be moved and sized on the selected cell.

Best regards
Koldo
