Hello Uno

Perhaps other focus would be to have an EditString that would appear on the selected cell when double clicked.

The problem I have is that I do not know the location of the double-clicked cell to fit on it the EditString.

In the screenshot the cell with "20" has been double clicked, the EditString is filled with the right formula ($12+8 = 20$), but it should be moved and sized on the selected cell.

Best regards
Koldo

The screenshot shows a grid with 7 columns and 10 rows. The cells contain numbers from 10 to 25. The cell at row 15, column 6 (value 20) is highlighted in blue. A red arrow points from the cell at row 12, column 3 (value 14) to the cell at row 15, column 6 (value 20). A text box containing '12+8' is positioned over the cell at row 12, column 3.
