andrei_natanael wrote on Mon, 14 December 2009 00:35Hello Koldo,
I have one suggestion for StaticArrow(and StaticLine), could you use enumerations for SetOrientation and SetEnds i believe it's simple(more portable) to use an enum than entering a string which depends on encoding.

In example:

```
enum ArrowEnds
```

```
{  
    LeftEnd,  
    RightEnd,  
    LeftRightEnd,  
    NoEnd  
};
```

```
arrow.SetEnds(LeftEnd);
```

The only inconvenient is that you have to find the right naming for orientations and ends.

Andrei

Hello Andrei

You are right in all. I will put the two systems.

The idea came about for example I do not know a nice way to define with an enum a line like this
:

Best regards
Koldo
