andrei\_natanael wrote on Mon, 14 December 2009 00:35Hello Koldo,  
I have one suggestion for StaticArrow(and StaticLine), could you use enumerations for  
SetOrientation and SetEnds i believe it's simple(more portable) to use an enum than entering a  
string which depends on encoding.

In example:

```
enum ArrowEnds
{
    LeftEnd,
    RightEnd,
    LeftRightEnd,
    NoEnd
};
```

```
arrow.SetEnds(LeftEnd);
```

The only inconvenient is that you have to find the right naming for orientations and ends.

Andrei

Hello Andrei

You are right in all. I will put the two systems.

The idea came about for example I do not know a nice way to define with an enum a line like this  
:

Best regards  
Koldo
