andrei_natanael wrote on Mon, 14 December 2009 00:35Hello Koldo,
I have one suggestion for StaticArrow(and StaticLine), could you use enumerations for
SetOrientation and SetEnds i believe it's simple(more portable) to use an enum than entering a
string which depends on encoding.

In example:

enum ArrowEnds
{
  LeftEnd,
  RightEnd,
  LeftRightEnd,
  NoEnd
};

arrow.SetEnds(LeftEnd);

The only inconvenient is that you have to find the right naming for orientations and ends.

Andrei

Hello Andrei

You are right in all. I will put the two systems.

The idea came about for example I do not know a nice way to define with an enum a line like this
:

Best regards
Koldo
