Ok, thanks to koldo, who provided me a TDM MINGW compiled version of the CtrlTest.exe, the error DID NOT occur anymore. so it seems to really be related to the buggy MINGW.

koldo, please post a downloadlink to your used MINGW environment or is it the current TDM 4.4.1 second release?

thank you very much for assistance.

==> seems the Upp release needs a new MINGW package to ship with.. would make sense, right?
