Subject: Constant font size in resizable RichEdit?

There is a task of making RichEdit editing some text. Control itself is resizable. Each time I change its width, it changes font size accordingly. This is suitable for reading books, but writing text while font size heavily depends on width of the window makes serious visual problem for writer. So I want to make font size constant and independent from width of RichEdit control. Is it possible? Could you please tell how to do it?
