koldo wrote on Sat, 26 December 2009 10:56Hello all

I would like to create a control that would know when it is located into a bigger control or window to resize inside properly.

Actually I get the Paint control event and I resize it into its parent window, but it has to be done in every Paint call...

Best regards

Koldo

I believe you are approaching it from the wrong side.

Maybe a little bit more actual description of the problem would allow me to provide a better advice.

Mirek
