fudadmin wrote on Tue, 11 April 2006 21:38Ok, Luigi, it' time for you to learn image designer...
Try and tell how it works...
P.S I haven't tested the logic and all functionality properly. This is a quick sample. Try to improve...
Any questions - just ask...
Unzip into ForlanoOption folder (no folders inside!)

I am not quite sure whether altering the library code is the right path here....

I guess, if you really insist on different images for option,

- make your option

- make me add customization of Option (something I in fact did not thought is necessary).

Of course, thing will be solved by Chameleon soon, but that will work for all options (Option calss), not just specific one.
