Subject: Re: static Ctrl causes running failure
Posted by mirek on Tue, 29 Dec 2009 13:19:04 GMT

It is known feature:

http://www.ultimatepp.org/srcdoc$Core$Caveats$en-us.html

Implementation difficulities in CtrlCore (widget gets created before GUI is initialised).

There is trivial workaround for majority of cases:

```
MyGlobalWidgetType& MyGlobalWidget() {
   static MyGlobalWidgetType x;
   return x;
}
```

(then of course, call this after gui is running, but that is OK for most uses).
