I believe 2009 was a quietly productive year for U++. There were some major additions to the library and I believe that we got to the final structure of basic U++ packages with abstract Draw and we now have high-quality Painter package for software rendering.

Maybe even more important is the fact that the development and releases became a routine business. Many thanks here go to Koldo and all release maintainers involved! I guess the current model, if not perfect, works quite well.

In the next year, I hope we could finally get the docking ide (Uno's and mrjt's job) and add macro support to Assist++ (my job) and finish more docs (everybody can participate! . Other than that, I am now quite happy with U++ - it does everything I have ever dreamed for.

I wish you Happy New Year 2010 and lot of fun with U++, programming, computers, friends, relatives, life and universe!

Mirek
