Hello MADIC

Quote:i am new to this forum and to upp. i quit programming more than 10 years ago, but i ever felt like coding again - can´t help it, can´t quit thinking in code. so i am about to jump in all this again.

searching for a lean, smart, flexible and portable dev system i came across upp and - wow - got very impressed by upp features! hats off! i hope, it turns out to be the right choice for a new start.

however, having used c++ for console applications only, i am quite new to this message driven gui concept. despite plenty of tutorials i hope you wouldn´t mind me asking some newbish questions... be certain i´ve been giving my best searching the web for answers

No problem. I felt like you one year and a half ago .

Quote:1. i miss something like SetPixel(x,y,c) - for the moment i use DrawLine(x,y,x,y+1,c) instead, but somehow i feel this is not very clever..

See this: http://www.ultimatepp.org/srcdoc$Draw$ImgTutorial$en-us.html and read "3. Creating and altering images in the code using ImageBuffer"

Quote:2. oh my how can i call the designer on a .lay file?

See this: http://www.ultimatepp.org/www$uppweb$FAQ$en-us.html and read "How to start the layout (image) designer?"

Probably you will get better answers... but I think these are not bad .

... and you are welcome !

Best regards
Koldo
