Try and tell how it works...
P.S I haven't tested the logic and all functionality properly. This is a quick sample. Try to improve...
Any questions - just ask...
Unzip into ForlanoOption folder (no folders inside!)

1. I am not quite sure whether altering the library code is the right path here....

I guess, if you really insist on different images for option,

2. - make your option

- make me add customization of Option (something I in fact did not thought is necessary).

Of course, thing will be solved by Chameleon soon, but that will work for all options (Option calss), not just specific one.

Mirek

1. Is overiding virtual paint in subclassed widget considered "altering" library code?

2. How then to make "your option"?
