
Subject: switch date format

Hi,

I'm just playing around with DropDate ...

setting output with:

```
SetDateFormat("%2:02d/%3:02d/%1:4d");  
SetDateScan("mdy");
```

works fine, but when I switch to "dmy" and open the calendar, it gets the date from the string and use "d" as "m" and "m" as "d" ...

is there already a way to solve this?

regards

reinhard
