mr_ped wrote on Mon, 11 January 2010 17:13those 30+ minutes... was that from (internal) main UPP SVN or from google mirror? The internal SVN is running behind ordinary ADSL line, so the upload is horrible. If you want fair comparison, you must time checkout from google's SVN. (I still bet the GIT would win, but I don't think the difference will be so huge)
Yes, you're right. It was main UPP SVN. Anyway i think git offer many more advantages than svn and you could easily mimic svn work-flow with git.
