mdelfede wrote on Wed, 13 January 2010 09:15And if I do

String const &IsA(void) { T * p = (T *)this; Cerr() << "\n" << typeid(*p).name() << "\n"; return myType; }

It always output '4Base' even if the class is the derived one.
Compiler bug ?

Do you have any virtual function in Base?
