Hi Zbych!

Zbych wrote on Fri, 15 January 2010 15:59:1. add a DeQtf around filese1.Get() to show full file names. Missed that, thanks.

Zbych wrote on Fri, 15 January 2010 15:59:2. I think you should place declaration of class/functions in *.h, rest of code in main.cpp. Right now almost everything is in *.h Well I usually don't care in small apps like this one. But I agree that it's good practice to do so.

Both bugs are fixed in the attached file. Also added some more comments about what some parts of code do. I think that beginners will appreciate if this works a little bit as a tutorial.

Anyone has some more comments?

Best regards,
Honza
