Novo wrote on Mon, 18 January 2010 03:02I'd make support for Imagelist optional and include support for Docking. Docking is cool.
Hi Novo,
The main reason for imagelist was exit icon There is none in CtrlImg (why?). But why not, it can be optional too.

I'm not sure what do you mean with docking support. Only reasonable feature I can imagine for small app like this is opening files on drag and drop to the window. Is that what you mean? Anyway, there is a little problem - I haven't learned any of that yet But you're free to contribute You can just send me the code (preferably based on the current template), I can convert it to template.

Best regards,
Honza
