Hi,

I noticed your trouble with splitter and as I tinkered with it recently I thought I should take a look at it.

Re-order:

```
splitter.Horz().SetPos(100).Set(pageList, pagePane);
```

to:

```
splitter.Horz().Set(pageList, pagePane);  
splitter.SetPos(100);
```

..and your code works. The reason is that in Splitter::Layout, newly added panels cause a re-initialization of splitter position array. I do not think that I did that change... I hope.
