hi folks

have found out the most in the meantime. but installing the MinGW yourself requires a readme of 16 hints:
http://netbeans.org/community/releases/67/cpp-setup-instruct ions.html#mingw
(oofff...)

I have Win2k now with 2008.1 and Win 7 at a second disk with the current version, and it's running fine in general.

thanks for your effort.
martin
