Hi Koldo,

I know what your problem is related to. When you add Painter package and compile with it, it put at program initialization two pointers in Draw package for it to use Painter initialization functions for ImageAnyDraw. Your problem is related to line 233 in Painter/DrawOp.cpp

```
INITBLOCK {  
    ImageAnyDrawPainter(sCP, sEP);  
}
```

Sorry for delayed response.

Andrei
