Hello.

I have a problem. I have Upp 1875 installed on Ubuntu 9.10. I do build example AddressBook.

Upp creates an error message at a stage linking:

"In function 'AddressBook':"

"undefined reference to 'Upp::FileSel::FileSel()'"

"undefined reference to 'Upp::TabCtrl::Add(Upp::Ctrl&, char const *)'"

etc.

I understand that types and methods are not defined. I do not understand that calls an error.

These are features of programming under Linux, or it is not customised Upp? I successful build this example under WinXP.
