Hello.
I have a problem. I have Upp 1875 installed on Ubuntu 9.10. I do build example AddressBook.
Upp creates an error message at a stage linking:
"In function 'AddressBook':"
"undefined reference to 'Upp::FileSel::FileSel()'"
"undefined reference to 'Upp::TabCtrl::Add(Upp::Ctrl&, char const *)'"
etc.
I understand that types and methods are not defined. I do not understand that calls an error.
These are features of programming under Linux, or it is not customised Upp? I successful build
this example under WinXP.
