zen10 wrote on Mon, 25 January 2010 05:09Hello.
I have a problem. I have Upp 1875 installed on Ubuntu 9.10. I do build example AddressBook.
Upp creates an error message at a stage linking:
"In function 'AddressBook':"
"undefined reference to 'Upp::FileSel::FileSel()'"
"undefined reference to 'Upp::TabCtrl::Add(Upp::Ctrl&, char const *)'"
etc.
I understand that types and methods are not defined. I do not understand that calls an error.
These are features of programming under Linux, or it is not customised Upp? I successful build
this example under WinXP.

I would say that the assembly of examples is broken.

Please check by clicking on CtrlLib in the package list. If the package is empty (no files listed in
bottom left pane), then this is the most likely cause.

You can fix the issue by right-clicking "examples" and changing the assembly path chain to
include existing uppsrc directory (where real CtrlLib package exists).
