What is new in version 1952:

TheIDE:
* Improved installation in Win32 with support for the latest Win32 SDK.
* Helpsystem has vastly improved searching capabilities.
* Build process now supports new link options - Posix releases now use "gc-sections" linker option to dramatically reduce the size of resulting binaries (up to 40%).

CtrlLib:
* File selector (FileSel class) got networking support in Win32.
* TrayIcon in X11 now supports notifications.
* TopWindow in X11 now supports SetAlphs.

Painter:
* Image rescaling algorithm was improved for better downscaling.

Core:
* Containers now have a new debugging utility to resolve pick semantic errors.
