What is new in version 1952:

TheIDE:

- * Improved installation in Win32 with support for the latest Win32 SDK.
- * Helpsystem has vastly improved searching capabilities.
- * Build process now supports new link options - Posix releases now use "gc-sections" linker option to dramatically reduce the size of resulting binaries (up to 40%).

CtrlLib:

- * File selector (FileSel class) got networking support in Win32.
- * TrayIcon in X11 now supports notifications.
- * TopWindow in X11 now supports SetAlphas.

Painter:

- * Image rescaling algorithm was improved for better downscaling.

Core:

- * Containers now have a new debugging utility to resolve pick semantic errors.
