Thanks cbppoter.

I have:

```
#include <CtrlLib/CtrlLib.h>
```

```
#include "ConnSock.h"
```

```
#include <Web/Web.h>
```

```
using namespace Upp;
```

```
#define LAYOUTFILE <Neilson1/dlg.lay>
```

```
#include <CtrlCore/lay.h>
```

"having implementations in header files is not a good idea"

How should that be done?
