I'm running Ultimate++ 1924 on Windows 7 with the VC2010 SDK. It compiled great except for a collision with stdlib on the 64bit abs definition. I renamed the one in core to "abs64". I know, a blatant hack. I apologize.

This can probably be fixed officially. But I think most U++ developers have not moved on yet to windows 7.

Rather VC2010...

Mirek
