There are either multiple solutions or none, depending on requirements:

- If the balloon has to be a native window then you will need to do the platform specific code yourself. This should be relatively easy in Win32, much more difficult in X11 (at least for a solution that works across window managers).
 - The easiest solution would be to cheat. Create a type of Parent ctrl that looks like a balloon and use that instead. The restriction here is that obviously it can't leave the parent window.
-
