void Avail3(One<Ctrl>& ctrl)

```
{  
// ctrl.Create<Option>().ThreeState();  
ctrl.Create<OptionImage>().ThreeState().SetImage(imgYes(), imgNo(), imgMaybe());  
  
}
```

I remind to have tried even this combination but without success . Perhaps there were a mistake in some other place.

Luigi

1. Perhaps you should try exactly what is here? (it's not in your code...)
2. I'm surprised how from such simple U++ application you were able to make a "spaghetti code"... . First of all, it doesn't run out of the box because I don't use C: and I don't have MyApp...
- Why do you use absolute references in *.upp file?
And you don't need a hundred of #include in each file with U++...
