kevinle10@gmail.com wrote on Thu, 13 April 2006 12:53OK, Mirek, are you refering to create context menu (pops up in response to a right click) for the ArrayCtrl? If so, I do not see any right click event.

Could you please point out an example? If not, could you please prepare one? Thanks

ANother issue I'm hitting a road block with ArrayCtrl right now is how can I capture the delete row event. What I'm really after is as follow. I'd like to keep my OK button disabled until the state of the ArrayCtrl changes.

So this is what I have so far:

```
valuesCtrl.WhenStartEdit = THISBACK(OnModified);
```

```
voidDlg::OnModified() { ok.Enable(true); }
```

This works for insert, append and edit but not for delete. Any idea please? I'm almost done. Can't wait to post in the "App created with U++" section.

See ArrayCtrl::WhenBar<Bar&>.
