Ok, gtk-qt-engine installed. In KControl I did check "Use my KDE style in GTK applications".

Now the GTK version looks better even under KDE3.5.
In the screenshot you can see even GTK TheIDE.

Although suddenly the system feels somewhat more sluggish. I'm not sure if it's the gtk-qt engine vs virtualbox SW rendering, or I didn't notice the slowness before, but I would swear the Gedit took 2 times longer to start then before.

I'm not inlining the pic because it's quite large.
