Thanks cbpporter.

cbpporter wrote on Thu, 04 February 2010 09:43

```
TopWindow& TopWindow::FrameLess(bool b = true)
```

That solves the third problem.

Space is important for a display in an aircraft. I have one app for GPS Tracking that has only a button that pulls up menu items and one text box on the same line. Getting rid of the top bar is important.

edit: For dragging Undecorated/FrameLess: While searching how to do it in Java I came across several in C++, I will just find one of those examples again.

Thanks

Neil
