I am using a GUI similar to mrjt's post in this thread.  
It works good.

How in the IDE do you put separator lines between the menu items and is it practical to change the pull down width?

The left is java and the right is u++.

edit: I found an example that had `menu.Separator();`  
with the location where it should be placed.

It worked after changing this to `bar.Separator();`

It would be good if the Help had some of this in an alphabetical listing. Searching the upp directory works if the naming of the functions are similar to other IDEs.
