gedumer wrote on Sat, 06 February 2010 01:35Thanks for the info... no problem at all.

BTW... does that also explain the strange appearance of theIDE mentioned above? It had a dark grey background and didn't seem to be affected by setting the GNOME appearance option.
Hello gedumer

Thank you for analyzing an reporting the problems.

The reason is the .deb compiling flags.

We have included libnotify-deb and right flags so we expect it will work now. Please try this download: http://sourceforge.net/projects/upp/files/upp/2019/upp_2019_ i386.deb/download.
