I like the ability to tinker with the dimensions manually for the location and size. For some of my apps this is very important.

With upp I was able to cut the size (left) from similar in java (right).

I have run into a problem. The app shows on the task bar but it cannot be minimized or closed from the task bar since I made it Frameless (Undecorated).

A search in the u++ directory for TaskBar found several in CtrlLib\TrayIconWin32.cpp and bazaar\UltimatePlayer but I was unable to figure out how to minimize/maximize and close from the TaskBar when the GUI is Frameless.

Can this be done with upp?
