By the way, in this forum we can read:

<http://www.mail-archive.com/google-maps-api@googlegroups.com/msg05299.html>

"You could first create a map webpage and host it online.

It should be accessible from the internet so that it satisfies the API  
Terms and Conditions of Use.

Then in your C++ application add a web browser control.

Customise the web browser control to make the GUI for your map page."

Alex
