dolik.rce wrote on Wed, 10 February 2010 07:28 There is only two minor glitches (of which I'm aware at the moment) that have to be fixed, so I hope I can incorporate this into U++ infrastructure soon.

Both problems solved. First was getting the Makefiles compatible with dpkg-buildpackage. The fix actually makes them more standard, and I'll upload it to svn tonight. Second problem was how to make the script to sign the packages non-interactively, while not compromising the security. The solution was easier than I expected, just a simple wrapper script.

So everything is ready to start incorporating it in the upbox. Be patient, it will take a few days, I have to solve the little details with Mirek. And also a bit more of testing won't hurt

Best regards,
Honza

PS: Version 2057 is compiled and ready in the repository
