Subject: Re: Defs.h minmax() change/fix Posted by kohait00 on Wed, 17 Feb 2010 09:24:51 GMT View Forum Message <> Reply to Message

yiy are right, the compiler warns warning C4172: returning address of local variable or temporary

using a

s = min(max(a, b), c);

//instead of

s = minmax(a, b, c);

does not produce this warning. i still dont get why.

maybe to have a

#define minmax(x, _min, max) min(max(x, _min), _max)

is a choice.

or at least

template <class T> inline T minmax(const T& x, const T& _min, const T& _max) { return min(max(x, _min), _max); }

reducing the need of object copy by 60% (roughly)

dont know it this is that much of speed saving, but using refs instead of temp copies is better anyway, isnt it?
