Hi,
the same problem i had and still have anyone who want to install U++ in Windows version from
Vista up. See http://www.ultimatepp.org/forum/index.php?t=msg&th=4991& amp;start=0&
If you install it on another partition it will not fail. That error is because the installer doesn't have
write rights to Windows partition. You'll have to run it as administrator.
