Hello Andrei,

I tried this way:

```
#if __unix || __unix__ || __APPLE__
    #define PLATFORM_POSIX 1
    #undef flagGUI

    // #ifdef flagGUI
    //     #define PLATFORM_X11 1
    // #endif
```

This was then the result.

The preferable way won't be to go without GTK. There are then several errors with all the keys.
