Hello Andrei,

I tried this way:

```
#if __unix || __unix__ || __APPLE__
        #define PLATFORM_POSIX 1
        #undef flagGUI

        //#ifdef flagGUI
        //    #define PLATFORM_X11 1
        //#endif
```

This was then the result.

The preferable way won't be to go without GTK. There are then several errors with all the keys.
