masu wrote on Fri, 26 February 2010 23:40Hi,

is there a way to tell the custom build step to only run the command if the file is newer than the output file?

At the moment, I use a custom build step command which is run every time I build the containing package.

But what I would like to have is to check first if the command run is really needed.

Matthias

Hi Matthias,

I think you could solve it using an if before your command, something like if [\$(FILE) -nt

Unfortunately it is not portable to windows
